- ✓ Maintenance, upgrades
- ✓ Break-Fix, Diagnostics
- ✓ Technical SME Staffing
- ✓ Client Support Center
- ✓ Planning and Consulting

Managed Storage-as-a-Service

As the demands for managing massive amounts of data grows, as-a-Service providers offer a scalable, more agile alternative to in-house staff managing storage on-premise. “As-a-Service” means that, instead of buying hardware and then dealing with the day-to-day maintenance and troubleshooting of the secondary storage solution, customers pay for an all-inclusive service which alleviates data center overhead. As-a-Service offerings take care of monitoring, diagnostics, failure management, and software updates. This is particularly valuable as data grows larger, bottom line - it lowers total cost of ownership (TCO).

BCI is your enterprise systems & storage solutions partner. We leverage our co-location hosting services for managing your Mainframe and storage server environments. BCI’s storage management solution for z/OS performs backup, restore, archive (migrate) and recall for all z/OS data sets and volume types, including z/OS Unix file-level backup and restore.
